JOURNAL OF FLUID MECHANICS

The JOURNAL OF FLUID MECHANICS exists for the publication of theoretical and experimental investigations of all aspects of the mechanics of fluids.

EDITORS

PROF. G. K. BATCHELOR, *Department of Applied Mathematics and Theoretical Physics, University of Cambridge, Silver Street, Cambridge CB3 9EW, England*

PROF. H. K. MOFFATT, *School of Mathematics, University of Bristol, Bristol BS8 1TW, England*

ASSOCIATE EDITORS

PROF. G. F. CARRIER, *Pierce Hall, Harvard University, Cambridge, Massachusetts 02138, U.S.A.*

PROF. D. G. CRIGHTON, *Department of Applied Mathematical Studies, University of Leeds, Leeds LS2 9JT England*

PROF. S. H. DAVIS, *Department of Engineering Sciences and Applied Mathematics, Northwestern University, Evanston, Illinois 60201, U.S.A.*

PROF. W. C. GRIFFITH, *Mechanical and Aerospace Engineering, North Carolina State University, Raleigh, North Carolina 27607, U.S.A.*

DR H. E. HUPPERT, *D.A.M.T.P., University of Cambridge, Silver St., Cambridge CB3 9EW, England*

DR M. E. MCINTYRE, *D.A.M.T.P., University of Cambridge, Silver St., Cambridge CB3 9EW, England*

PROF. J. W. MILES, *Institute of Geophysics and Planetary Physics, A–025, University of California, La Jolla, California 92093, U.S.A.*

PROF. O. M. PHILLIPS, *Department of Earth and Planetary Sciences, The Johns Hopkins University, Baltimore, Maryland 21218, U.S.A.*

PROF. J. A. SHERCLIFF, *Department of Engineering, University of Warwick, Coventry, Warwickshire CV4 7AL, England*

PROF. J. S. TURNER, *Research School of Earth Sciences, The Australian National University, P.O. Box 4, Canberra 2600, Australia*

ASSISTANT EDITORS DR J. C. R. HUNT, DR D. J. JEFFREY, DR D. H. PEREGRINE

EDITORIAL ASSISTANT MRS E. BAKER

Authors wishing to have papers published in the *Journal* should send them to any editor named above, choosing one in their own country if possible. The submission of two or three copies will expedite assessment, although it may not be possible to return all these copies. Original drawings for figures should not be sent until the paper is accepted.

Authors are urged to write their papers clearly and attractively, so that their work will be readily accessible to readers. Manuscripts should be typed in double spacing on one side of the paper only, with references listed at the end in alphabetical order of authors. Drawings should be done in Indian ink on plain white or transparent paper, and should not be larger than 40 cm by 60 cm. Lettering should be shown clearly in pencil for reproduction by the printer, and as far as possible information relating to a figure should be placed in the caption rather than on the figure. A typed list of captions should be provided at the end of the manuscript.

Proofs of papers from overseas will usually be despatched to authors by airmail. There is no charge for publication. An author is entitled to 50 offprints of his paper free of charge, and additional offprints can be purchased if ordered when proofs are returned.

COPYING

The *Journal* is registered with the Copyright Clearance Center, P.O. Box 8891, Boston, Mass. 02114. Organizations in the U.S.A. which are also registered with C.C.C. may therefore copy material (beyond the limits permitted by sections 107 and 108 of U.S. Copyright law) subject to payment to C.C.C. of the per-copy fee indicated. This consent does not extend to multiple copying for promotional or commercial purposes.

ISI Tear Service, 3501 Market Street, Philadelphia, Pennsylvania 19104, U.S.A., is authorized to supply single copies of separate articles for private use only.

For all other use of material from the *Journal* permission should be sought from the Cambridge or New York office of the Cambridge University Press.

SUBSCRIPTIONS

The JOURNAL OF FLUID MECHANICS (ISSN 0022–1120) is published in six volumes of four parts. All orders must be accompanied by payment. Single parts cost £9.00 net (US $25.50 in the U.S.A. and Canada) plus postage. The subscription price (which includes postage) to volumes 96–101, 1980, is £27.00 per volume (US $80.00 in the U.S.A. and Canada) for institutions; £13.50 (US $40.00) per volume for individuals. Copies of the journal for subscribers in the U.S.A and Canada are sent by air to New York. Second class postage is paid at New York, N.Y. Claims for missing issues will be considered only if made immediately upon receipt of the subsequent issue. Copies of back numbers are available from Cambridge University Press.

POSTMASTER: send address changes in U.S.A. and Canada to Cambridge University Press, 32 East 57th Street, New York, N.Y. 10022.

CONTENTS TO VOLUME 97

PART 1 11 MARCH 1980

Spin and angular momentum in gravity waves. M. S. LONGUET-HIGGINS *page* 1

Internal separated flows at large Reynolds number. ANAND KUMAR and KIRIT S. YAJNIK 27

Penetration of fluid into a Hele–Shaw cell: the Saffman–Taylor experiment E. PITTS 53

Turbulence measurements in a constricted tube. M. D. DESHPANDE and D. P. GIDDENS 65

The tank wall effect on internal waves due to a transient vertical force moving at fixed depth in a density stratified fluid. E. W. GRAHAM and B. B. GRAHAM 91

Wake collapse in the thermocline and internal solitary waves. TIMOTHY W. KAO and HSIEN-PING PAO 115

Laminar boundary-layer reattachment in supersonic flow. Part 2. Numerical solution. P. G. DANIELS 129

Oseen velocity distributions in the wake of a flat plate. TOSIO MIYAGI and MICHIO NISHIOKA 145

An approximate method for solving two-dimensional low-Reynolds-number flow past arbitrary cylindrical bodies. H. YANG and A. KIEDA 157

Comments on the quasi-normal Markovian approximation for fully-developed turbulence. H. FRISCH, M. LESIEUR and D. SCHERTZER 182

Theoretical calculations of turbulent bispectra. JACKSON R. HERRING 193

Bispectra of internal waves. C. H. MCCOMAS and M. G. BRISCOE 205

A similarity relation for the nonlinear energy transfer in a finite-depth gravity-wave spectrum. K. HERTERICH and K. HASSELMANN 215

PART 2 25 MARCH 1980

Effects of peripheral-layer viscosity on peristaltic transport of a bio-fluid. J. B. SHUKLA, R. S. PARIHAR, B. R. P. RAO and S. P. GUPTA 225

Some flow visualization experiments on the starting vortex. D. I. PULLIN and A. E. PERRY 239

Infinite Prandtl number thermal convection in a spherical shell. ABDELFATTAH ZEBIB, GERALD SCHUBERT and JOE M. STRAUS 257

Buoyancy force reversals in vertical natural convection flows in cold water. VAN P. CAREY, BENJAMIN GEBHART and JOSEPH C. MOLLENDORF 279

Low-frequency pressure fluctuations in axisymmetric turbulent boundary layers. RONALD L. PANTON, A. L. GOLDMAN, R. L. LOWERY and M. M. REISCHMAN 299

Flow development of a highly viscous fluid emerging from a slit onto a plate. A. Stücheli *page* 321

The forces on sharp-edged cylinders in oscillatory flow at low Keulegan–Carpenter numbers. J. M. R. Graham 331

Unsteady laminar separation: an experimental study. C. A. Koromilas and D. P. Telionis 347

Applicability of the isotropic vorticity theory to an adverse pressure gradient flow. S. C. Arora and R. S. Azad 385

Some turbulent diffusion invariants. P. C. Chatwin and Paul J. Sullivan 405

Part 3 15 April 1980

Steady flow in rapidly rotating variable-area rectangular ducts. Part 3. Inertial perturbations for small divergences. J. S. Walker and A. M. El-Consul 417

On nose separation. Tuncer Cebeci, A. K. Khattab and Keith Stewartson 435

The spectral characteristics of wind-generated capillary waves. G. T. Lleonart and Deane R. Blackman 455

Effects of the non-equilibrium condensation of vapour on the pressure wave produced by the collapse of a bubble in a liquid. Shigeo Fujikawa and Teruaki Akamatsu 481

Coupled interactions of shock-wave structure with laminar boundary layers in ionizing-argon gas flows. W. S. Liu, K. Takayama and I. I. Glass 513

The oblique wing as a lifting-line problem in transonic flow. H. K. Cheng and S. Y. Meng 531

Energy transmission by surface waves through an opening. C. D. Memos 557

Eulerian direct interaction applied to the statistical motion of particles in a turbulent fluid. M. W. Reeks 569

The propulsion by large amplitude waves of uniflagellar micro-organisms of finite length. R. D. Dresdner, D. F. Katz and S. A. Berger 591

Vorticity dynamics of a convective swirling boundary layer. Richard Rotunno 623

Part 4 29 April 1980

The influence of vortex shedding on the diffraction of sound by a perforated screen. M. S. Howe 641

Extensional flow of dilute polymer solutions. David F. James and J. H. Saringer 655

Measurements of heat transfer to a flat plate in a dissociated high-enthalpy laminar air flow. R. A. East, R. J. Stalker and J. P. Baird 673

Water waves and Korteweg–de Vries equations. R. S. Johnson 701

The attenuation of water waves over a non-rigid bed. HUGH MACPHERSON *page* 721

Heat source-driven thermal convection at arbitrary Prandtl number. F. B. CHEUNG 743

Two-dimensional linear and nonlinear stern waves. H. J. HAUSSLING 759

A note on spanwise structure in the two-dimensional mixing layer. F. K. BROWAND and T. R. TROUTT 771

Shoaling of finite-amplitude surface waves on water of slowly-varying depth. M. STIASSNIE and D. H. PEREGRINE 783

On thermally forced stratified rotating fluids. LARS RAHM and GÖSTA WALIN 807

ASSISTANT EDITORS DR J. C. R. HUNT, DR D. J. JEFFREY, DR D. H. PEREGRINE

EDITORIAL ASSISTANT MRS E. BAKER

Authors wishing to have papers published in the *Journal* should send them to any editor named above, choosing one in their own country if possible. The submission of two or three copies will expedite assessment, although it may not be possible to return all these copies. Original drawings for figures should not be sent until the paper is accepted.

Authors are urged to write their papers clearly and attractively, so that their work will be readily accessible to readers. Manuscripts should be typed in double spacing on one side of the paper only, with references listed at the end in alphabetical order of authors. Drawings should be done in Indian ink on plain white or transparent paper, and should not be larger than 40 cm by 60 cm. Lettering should be shown clearly in pencil for reproduction by the printer, and as far as possible information relating to a figure should be placed in the caption rather than on the figure. A typed list of captions should be provided at the end of the manuscript.

Proofs of papers from overseas will usually be despatched to authors by airmail. There is no charge for publication. An author is entitled to 50 offprints of his paper free of charge, and additional offprints can be purchased if ordered when proofs are returned.

COPYING

The *Journal* is registered with the Copyright Clearance Center, 21 Congress St., Salem, Mass. 01970. Organizations in the U.S.A. which are also registered with C.C.C. may therefore copy material (beyond the limits permitted by sections 107 and 108 of U.S. Copyright law) subject to payment to C.C.C. of the per-copy fee indicated. This consent does not extend to multiple copying for promotional or commercial purposes.

ISI Tear Service, 3501 Market Street, Philadelphia, Pennsylvania 19104, U.S.A., is authorized to supply single copies of separate articles for private use only.

For all other use of material from the *Journal* permission should be sought from the Cambridge or New York office of the Cambridge University Press.

SUBSCRIPTIONS

The JOURNAL OF FLUID MECHANICS (ISSN 0022-1120) is published in six volumes of four parts. All orders must be accompanied by payment. Single parts cost £8.00 net (US $25.50 in the U.S.A. and Canada) plus postage. The subscription price (which includes postage) to volumes 96–101, 1980, is £27.00 per volume (US $80.00 in the U.S.A. and Canada) for institutions; £13.50 (US $40.00) per volume for individuals. Copies of the journal for subscribers in the U.S.A and Canada are sent by air to New York. Second class postage is paid at New York, N.Y. Claims for missing issues will be considered only if made immediately upon receipt of the subsequent issue. Copies of back numbers are available from Cambridge University Press.

POSTMASTER: send address changes in U.S.A. and Canada to Cambridge University Press, 32 East 57th Street, New York, N.Y. 10022.

CONTENTS TO VOLUME 98

PART 1 15 MAY 1980

A modelling of large eddies in an axisymmetric jet. E. ACTON *page* 1

A nonlinear unsteady one-dimensional theory for wings in extreme ground effect. E. O. TUCK 33

Observations and LDA measurements of confined vortex flow. M. P. ESCUDIER, J. BORNSTEIN and N. ZEHNDER 49

A 'turbulent spot' in an axisymmetric free shear layer. Part 1. M. SOKOLOV, A. K. M. F. HUSSAIN, S. J. KLEIS and Z. D. HUSAIN 65

A 'turbulent spot' in an axisymmetric free shear layer. Part 2. A. K. M. F. HUSSAIN, S. J. KLEIS and M. SOKOLOV 97

Effect of departures from the Oberbeck–Boussinesq approximation on the heat transport of horizontal convecting fluid layers. GUENTER AHLERS 137

A resonance mechanism in plane Couette flow. L. HÅKAN GUSTAVSSON and LENNART S. HULTGREN 149

A new family of capillary waves. JEAN-MARC VANDEN-BROECK and JOSEPH B. KELLER 161

The response of sheared turbulence to additional distortion. A. A. Townsend 171

Motion of a sphere in the presence of a plane interface. Part 2. An exact solution in bipolar co-ordinates. S. H. LEE and L. G. LEAL 193

PART 2 29 MAY 1980

Moving contact lines and rivulet instabilities. Part 1. The static rivulet. STEPHEN H. DAVIS 225

A note on an algebraic instability of inviscid parallel shear flows. M. T. LANDAHL 243

Thermally-induced extrudate swell. H. B. PHUOC and R. I. TANNER 253

Linear stability of Poiseulle flow in a circular pipe. HAROLD SALWEN, FREDRICK W. COTTON and CHESTER E. GROSCH 273

On the Mach reflexion of a solitary wave. W. K. MELVILLE 285

A note on the rate of heat or mass transfer from a small particle freely suspended in a linear shear field. ANDREAS ACRIVOS 299

Long slender drops in a simple shear flow. E. J. HINCH and A. ACRIVOS 305

Randomly forced Rayleigh–Bénard convection. BHARAT JHAVERI and G. M. HOMSY 329

The radiation of sound by the instability waves of a compressible plane turbulent shear layer. CHRISTOPHER K. W. TAM and PHILIP J. MORRIS 349

Oscillatory flow in curved pipes. Part 1. The developing-flow case. T. Mullin and C. A. Greated 383

Oscillatory flow in curved pipes. Part 2. The fully developed case. T. Mullin and C. A. Greated 397

Buoyancy-driven asymmetric water boundary layer along a heated cylinder. Lun-Shin Yao, Ivan Catton and J. M. McDonough 417

Analysis of a strongly sheared, nearly homogeneous turbulent shear flow. D. C. Leslie 435

Part 3 12 June 1980

Finite-amplitude thermal convection and geostrophic flow in a rotating magnetic system. A. M. Soward 449

The effect of finite turbulence spatial scale on the amplification of turbulence by a contracting stream. M. E. Goldstein and P. A. Durbin 473

On head-on collisions between two solitary waves. C. H. Su and Rida M. Mirie 509

Energy stability theory for free-surface problems: buoyancy–thermocapillary layers. Stephen H. Davis and George M. Homsy 527

On coastal trapped waves at low latitudes in a stratified ocean. J. S. Allen and R. D. Romea 555

A model of confined thermal convection driven by non-uniform heating from below. Peter D. Killworth and Peter C. Manins 587

Mass transfer from small particles suspended in turbulent fluid. G. K. Batchelor 609

Note on the time-dependent deformation of a viscous drop which is almost spherical J. M. Rallison 625

The effects of shear and vorticity on deformation of a drop. F. S. Hakimi and W. R. Schowalter 635

Comparison of nonlinear wave-resistance theories for a two-dimensional pressure distribution. L. J. Doctors and G. Dagan 647

Part 4 26 June 1980

Surface-roughness effects on the mean flow past circular cylinders. O. Güven, C. Farell and V. C. Patel 673

Seasonal and spring–neap tidal dependence of axial dispersion coefficients in the Severn – a wide, vertically mixed estuary. R. J. Uncles and P. J. Radford 703

On the severe non-symmetric constriction, curving or cornering of channel flows. F. T. Smith and P. W. Duck 727

Double-diffusive instability in an inclined fluid layer Part 1. Experimental investigation. R. C. Paliwal and C. F. Chen 755

Double-diffusive instability in an inclined fluid layer. Part 2. Stability analysis. R. C. PALIWAL and C. F. CHEN 769

A mathematical model for fluid flow in a weld pool at high currents. D. R. ATTHEY 787

Shelves and the Korteweg–de Vries equation. C. J. KNICKERBOCKER and ALAN C. NEWELL 803

A numerical study of steady viscous flow past a circular cylinder. BENGT FORNBERG 819

ASSISTANT EDITORS DR J. C. R. HUNT, DR D. J. JEFFREY, DR D. H. PEREGRINE

EDITORIAL ASSISTANT MRS E. BAKER

Authors wishing to have papers published in the *Journal* should send them to any editor named above, choosing one in their own country if possible. The submission of two or three copies will expedite assessment, although it may not be possible to return all these copies. Original drawings for figures should not be sent until the paper is accepted.

Authors are urged to write their papers clearly and attractively, so that their work will be readily accessible to readers. Manuscripts should be typed in double spacing on one side of the paper only, with references listed at the end in alphabetical order of authors. Drawings should be done in Indian ink on plain white or transparent paper, and should not be larger than 40 cm by 60 cm. Lettering should be shown clearly in pencil for reproduction by the printer, and as far as possible information relating to a figure should be placed in the caption rather than on the figure. A typed list of captions should be provided at the end of the manuscript.

Proofs of papers from overseas will usually be despatched to authors by airmail. There is no charge for publication. An author is entitled to 50 offprints of his paper free of charge, and additional offprints can be purchased if ordered when proofs are returned.

COPYING

The *Journal* is registered with the Copyright Clearance Center, 21 Congress St., Salem, Mass. 01970. Organizations in the U.S.A. which are also registered with C.C.C. may therefore copy material (beyond the limits permitted by sections 107 and 108 of U.S. Copyright law) subject to payment to C.C.C. of the per-copy fee indicated. This consent does not extend to multiple copying for promotional or commercial purposes.

ISI Tear Service, 3501 Market Street, Philadelphia, Pennsylvania 19104, U.S.A., is authorized to supply single copies of separate articles for private use only.

For all other use of material from the *Journal* permission should be sought from the Cambridge or New York office of the Cambridge University Press.

SUBSCRIPTIONS

The JOURNAL OF FLUID MECHANICS (ISSN 0022-1120) is published in six volumes of four parts. All orders must be accompanied by payment. Single parts cost £8.00 net (US $25.50 in the U.S.A. and Canada) plus postage. The subscription price (which includes postage) to volumes 96–101, 1980, is £27.00 per volume (US $80.00 in the U.S.A. and Canada) for institutions; £13.50 (US $40.00) per volume for individuals. Copies of the journal for subscribers in the U.S.A and Canada are sent by air to New York. Second class postage is paid at New York, N.Y. Claims for missing issues will be considered only if made immediately upon receipt of the subsequent issue. Copies of back numbers are available from Cambridge University Press.

POSTMASTER: send address changes in U.S.A. and Canada to Cambridge University Press, 32 East 57th Street, New York, N.Y. 10022.

CONTENTS TO VOLUME 99

PART 1 11 JULY 1980

Fluid flow in a hemispherical container induced by a distributed source of current and a superimposed uniform magnetic field. R. E. CRAINE and N. P. WEATHERILL *page* 1

Decaying turbulence in neutral and stratified fluids. T. D. DICKEY and G. L. MELLOR 13

Forward diffraction of Stokes waves by a thin wedge. DICK K. P. YUE and CHIANG C. MEI 33

A visual investigation of turbulence in stagnation flow about a circular cylinder. WILLY Z. SADEH and HERBERT J. BRAUER 53

The effect of centrifugal acceleration on axisymmetric convection in a shallow rotating cylinder or annulus. P. G. DANIELS 65

Accurate fluxes across a salt–sugar finger interface deduced from direct density measurements. R. W. GRIFFITHS and B. R. RUDDICK 85

Energetics of a linear array of hollow vortices of finite cross-section. GREGORY R. BAKER 97

An analysis of advective diffusion in branching channels. P. F. HAMBLIN 101

Velocity measurements inside a rotating cylindrical cavity with a radial outflow of fluid. J. M. OWEN and J. R. PINCOMBE 111

A family of steady, translating vortex pairs with distributed vorticity. R. T. PIERREHUMBERT 129

Some linear relations for bodies in a canal, with an application to wave-power absorption. M. A. SROKOSZ 145

A parametrical model for the vertical structure of the induced atmospheric pressure field above a spectrum of surface gravity waves. ROBERT BRYAN LONG 163

A three-dimensional boundary-layer separation. F. T. SMITH 185

PART 2 25 JULY 1980

Vortex shedding from bluff bodies in oscillatory flow: A report on Euromech 119. P. W. BEARMAN and J. M. R. GRAHAM 225

Nonlinear evolution and breakdown in unstable boundary layers. A. D. D. CRAIK 247

A quasi-linear theory for rotating flow over topography. Part 1. Steady β-plane channel. MICHAEL K. DAVEY 267

Flow in the exit of open pipes during acoustic resonance. J. H. M. DISSELHORST and L. VAN WIJNGAARDEN 293

Boundary-layer velocities and mass transport in short-crested waves. J. R. C. Hsu, R. Silvester and Y. Tsuchiya *page* 321

Numerical analysis of the nonlinear propagation of plane periodic waves in a relaxing gas. I. S. Southern and N. H. Johannesen 343

A finite-rate theory of resonance in a closed tube: discontinuous solutions of a functional equation. Brian R. Seymour and Michael P. Mortell 365

The generation of combustion noise by chemical inhomogeneities in steady, low-Mach-number duct flows. Y. L. Sinai 383

Flow separation on a β-plane. Lee-or Merkine 399

An improved slender-body theory for Stokes flow. Robert E. Johnson 411

On the stability of rotating compressible and inviscid fluids. Knut S. Eckhoff and Leiv Storesletten 433

Part 3 14 August 1980

Calculation of the steady flow through a curved tube using a new finite-difference method. S. C. R. Dennis 449

On laminar flow in curved semicircular ducts. Jacob H. Masliyah 469

Small-scale magnetic fields in turbulence: Saffman's approximation revisited Ralph Baierlein 481

Theory and observations of waves on hollow-core vortices. Jakob J. Keller and M. P. Escudier 495

The extensional viscosity of a dilute suspension of spherical particles at intermediate microscale Reynolds numbers. G. Ryskin 513

The motion of the front of a gravity current travelling down an incline. R. E. Britter and P. F. Linden 531

An experimental study of the effect of uniform strain on thermal fluctuations in grid-generated turbulence. Z. Warhaft 545

Centrifugal instabilities in finite containers: a periodic model. P. Hall 575

The formation of ripples and dunes on an erodible bed. Kelvin J. Richards 597

Wave formation and heat transfer at an ice–water interface in the presence of a turbulent flow. R. R. Gilpin, T. Hirata and K. C. Cheng 619

Techniques of sizing and tracking of particles: A report on Euromech 120. P. S. Larson, F. Engelund, B. M. Sumer and L. Lading 641

Mean flows driven by weak eddies in rotating systems. A. D. McEwan, R. O. R. Y. Thompson and R. A. Plumb 655

Part 4 29 August 1980

Dispersion effects on thermal convection in porous media. Oddmund Kvernvold and Peder A. Tyvand 673

Geostrophic fronts, bores, breaking and blocking waves. Melvin E. Stern 687

Modulation of the amplitude of steep wind waves. M. S. LONGUET-HIGGINS *page* 705

On wave-current interaction theories of Langmuir circulations. S. LEIBOVICH 715

Stability of the conduction regime of natural convection in a tall vertical annulus. INN G. CHOI and SEPPO A. KORPELA 725

A strong interaction theory for the creeping motion of a sphere between plane parallel boundaries. Part 1. Perpendicular motion. PETER GANATOS, SHELDON WEINBAUM and ROBERT PFEFFER 739

A strong interaction theory for the creeping motion of a sphere between plane parallel boundaries. Part 2. Parallel motion. PETER GANATOS, ROBERT PFEFFER and SHELDON WEINBAUM 755

The slumping of gravity currents. HERBERT E. HUPPERT and JOHN E. SIMPSON 785

On the Whitham theory of shock-wave diffraction at concave corners. L. F. HENDERSON 801

The backwash vortex. N. MATSUNAGA and H. HONJI 813

Autorotation of an elliptic cylinder about an axis perpendicular to the flow. HANS J. LUGT 817

Self-similar explosion waves of variable energy at the front. G. I. BARENBLATT, R. H. GUIRGUIS, M. M. KAMEL, A. L. KUHL, A. K. OPPENHEIM and YA. B. ZEL'DOVICH 841

ASSISTANT EDITORS DR J. C. R. HUNT, DR D. J. JEFFREY, DR D. H. PEREGRINE

EDITORIAL ASSISTANT MRS E. BAKER

Authors wishing to have papers published in the *Journal* should send them to any editor named above, choosing one in their own country if possible. The submission of two or three copies will expedite assessment, although it may not be possible to return all these copies. Original drawings should not be sent until the paper is accepted.

Authors are urged to write their papers clearly and attractively, so that their work will be readily accessible to readers. Manuscripts should be typed in double spacing on one side of the paper only, with references listed at the end in alphabetical order of authors. Drawings should be in black Indian ink on plain white or transparent paper, and should not be larger than 40 cm by 60 cm. Lettering should be shown clearly in pencil for reproduction by the printer, and as far as possible information relating to a figure should be placed in the caption rather than on the figure. A typed list of captions should be provided at the end of the manuscript.

Proofs of papers from overseas will usually be despatched to authors by airmail. There is no charge for publication. An author is entitled to 50 offprints of his paper free of charge, and additional offprints can be purchased if ordered when proofs are returned.

COPYING

The *Journal* is registered with the Copyright Clearance Center, 21 Congress St., Salem, Mass. 01970. Organizations in the U.S.A. which are also registered with C.C.C. may therefore copy material (beyond the limits permitted by sections 107 and 108 of U.S. copyright law) subject to payment to C.C.C. of the per-copy fee indicated. This consent does not extend to multiple copying for promotional or commercial purposes.

ISI Tear Service, 3501 Market Street, Philadelphia, Pennsylvania 19104, U.S.A., is authorized to supply single copies of separate articles for private use only.

For all other use of material from the *Journal* permission should be sought from the Cambridge or New York office of the Cambridge University Press.

SUBSCRIPTIONS

The JOURNAL OF FLUID MECHANICS (ISSN 0022-1120) is published in six volumes of four parts. All orders must be accompanied by payment. Single parts cost £8.00 net (US $25.50 in the U.S.A. and Canada) plus postage. The subscription price (which includes postage) to volumes 96–101, 1980, is £27.00 per volume (US $80.00 in the U.S.A. and Canada) for institutions; £13.50 (US $40.00) per volume for individuals. Copies of the journal for subscribers in the U.S.A and Canada are sent by air to New York. Second class postage is paid at New York, N.Y. Claims for missing issues will be considered only if made immediately upon receipt of the subsequent issue. Copies of back numbers are available from Cambridge University Press.

POSTMASTER: send address changes in U.S.A. and Canada to Cambridge University Press, 32 East 57th Street, New York, N.Y. 10022.

CONTENTS TO VOLUME 101

PART 1 13 NOVEMBER 1980

Onsager's pancake approximation for the fluid dynamics of a gas centrifuge. HOUSTON G. WOOD and J. B. MORTON *page* 1

The spreading of thin liquid films on a water–air interface. M. FODA and R. G. COX 33

Vertical slender jets. JAMES F. GEER and JOHN C. STRIKWERDA 53

The rate of magnetic field penetration through a Bénard convection layer. E. M. DROBYSHEVSKI, E. N. KOLESNIKOVA and V. S. YUFEREV 65

Direct measurements of skin friction in a turbulent boundary layer with a strong adverse pressure gradient. D. FREI and H. THOMANN 79

Asymmetric creeping motion of an open torus. SIMON L. GOREN and MICHAEL E. O'NEILL 97

Linear Rayleigh–Taylor stability of viscous fluids with mass and heat transfer. S. P. HO 111

Full-coverage film cooling. Part 1. Three-dimensional measurements of turbulence structure. S. YAVUZKURT, R. J. MOFFAT and W. M. KAYS 129

Full-coverage film cooling. Part 2. Prediction of the recovery-region hydrodynamics. S. YAVUZKURT, R. J. MOFFAT and W. M. KAYS 159

An experimental study of the surface elevation probability distribution and statistics of wind-generated waves. NORDEN E. HUANG and STEVEN R. LONG 179

Jet diffusion from a circular nozzle above a solid plane. M. R. DAVIS and H. WINARTO 201

REVIEWS

Similarity, Self-similarity, and Intermediate Asymptotics, by G. I. Barenblatt 222

Ocean Acoustics, edited by J. A. DeSanto 223

PART 2 27 NOVEMBER 1980

On the thermodynamics of nonlinear constitutive relations in gasdynamics L. C. WOODS 225

The instantaneous velocity fields of coherent structures in coflowing jets and wakes. A. E. PERRY, T. T. LIM and M. S. CHONG 243

The steady flow due to a rotating sphere at low and moderate Reynolds numbers. S. C. R. DENNIS, S. N. SINGH and D. B. INGHAM 257

Rotating barotropic flow over finite isolated topography. PETER R. BANNON 281

Shock detachment from cones in a relaxing gas. H. G. HORNUNG and A. F. P. HOUWING 307

Long nonlinear waves in stratified shear flows. S. A. Maslowe and L. G. Redekopp 321

Dynamical cascade models for Kolmogorov's inertial flow. Jon Lee 349

On the behaviour of the laminar boundary-layer equations of mixed convection near a point of zero skin friction. Roland Hunt and Graham Wilks 377

Rotational compressible inviscid flow with rolled vortex sheets. An analytical algorithm for the computation of the core. J. P. Guiraud and R. Kh. Zeytounian 393

Heat transfer to a slowly moving fluid from a dilute fixed bed of heated spheres. A. Acrivos, E. J. Hinch and D. J. Jeffrey 403

Nonlinear oscillations of non-spherical cavitation bubbles in acoustic fields. P. Hall and G. Seminara 423

Reviews

Hydroelasticity of Ships, by R. E. D. Bishop and W. G. Price 445

Shorter notices 446

Part 3 11 December 1980

Vortex pairing in a circular jet under controlled excitation. Part 1. General jet response. K. B. M. Q. Zaman and A. K. M. F. Hussain 449

Vortex pairing in a circular jet under controlled excitation. Part 2. Coherent structure dynamics. A. K. M. F. Hussain and K. B. M. Q. Zaman 493

The evolution of slender inviscid drops in an axisymmetric straining flow. E. J. Hinch 545

The return to anisotropy of an homogeneous turbulence having been submitted to two successive plane strains. J. N. Gence and J. Mathieu 555

Long wavelength bifurcation of gravity waves on deep water. P. G. Saffman 567

The early stage of development of the wake behind an impulsively started cylinder for $40 < Re < 10^4$. Roger Bouard and Madeleine Coutanceau 583

The primary electroviscous effect in a suspension of spheres. J. D. Sherwood 609

The numerical simulation of the steady movement of a fluid meniscus in a capillary tube. James Lowndes 631

An asymptotic theory of incompressible turbulent boundary-layer flow over a small hump. R. I. Sykes 649

Review

An Introduction to Dynamic Meteorology, by James R. Holton 671

Part 4 29 December 1980

Deformation of a bubble or drop in a uniform flow. Jean-Marc Vanden-Broeck and Joseph B. Keller 673

The mixing layer of Loch Ness. S. A. Thorpe and A. J. Hall 687

Refraction–diffraction model for linear surface water waves. Carlos Lozano and Philip L.-F. Liu 705

Vortex-shedding from a circular cylinder in moderate-Reynolds-number shear flow. Masaru Kiya, Hisataka Tamura and Mikio Arie 721

Thermophoresis of particles in a heated boundary layer. L. Talbot, R. K. Cheng, R. W. Schefer and D. R. Willis 737

Nonlinear Rayleigh–Bénard convection between poorly conducting boundaries. C. J. Chapman and M. R. E. Proctor 759

On the skewness of the temperature derivative in turbulent flows. K. R. Sreenivasan and S. Tavoularis 783

A new type of three-dimensional deep-water wave of permanent form. Philip G. Saffman and Henry C. Yuen 797

Wave reflexion from beaches. J. J. Mahony and W. G. Pritchard 809

Effects of the motion of dust particles on turbulence transport equations. Zh. D. Genchev and D. S. Karpuzov 833

The interaction between stirring and osmosis. Part 1. T. J. Pedley 843
